

Customer Churn Analytics & Business Intelligence Platform

Overview

This project analyses customer churn for a telecom company using Power BI, Python, SQL, and DAX. The objective is to identify churn drivers, segment customers, evaluate financial risk, and provide actionable business recommendations.

Business Problem

Telecom providers face significant revenue loss due to customer churn.

The objective was to:

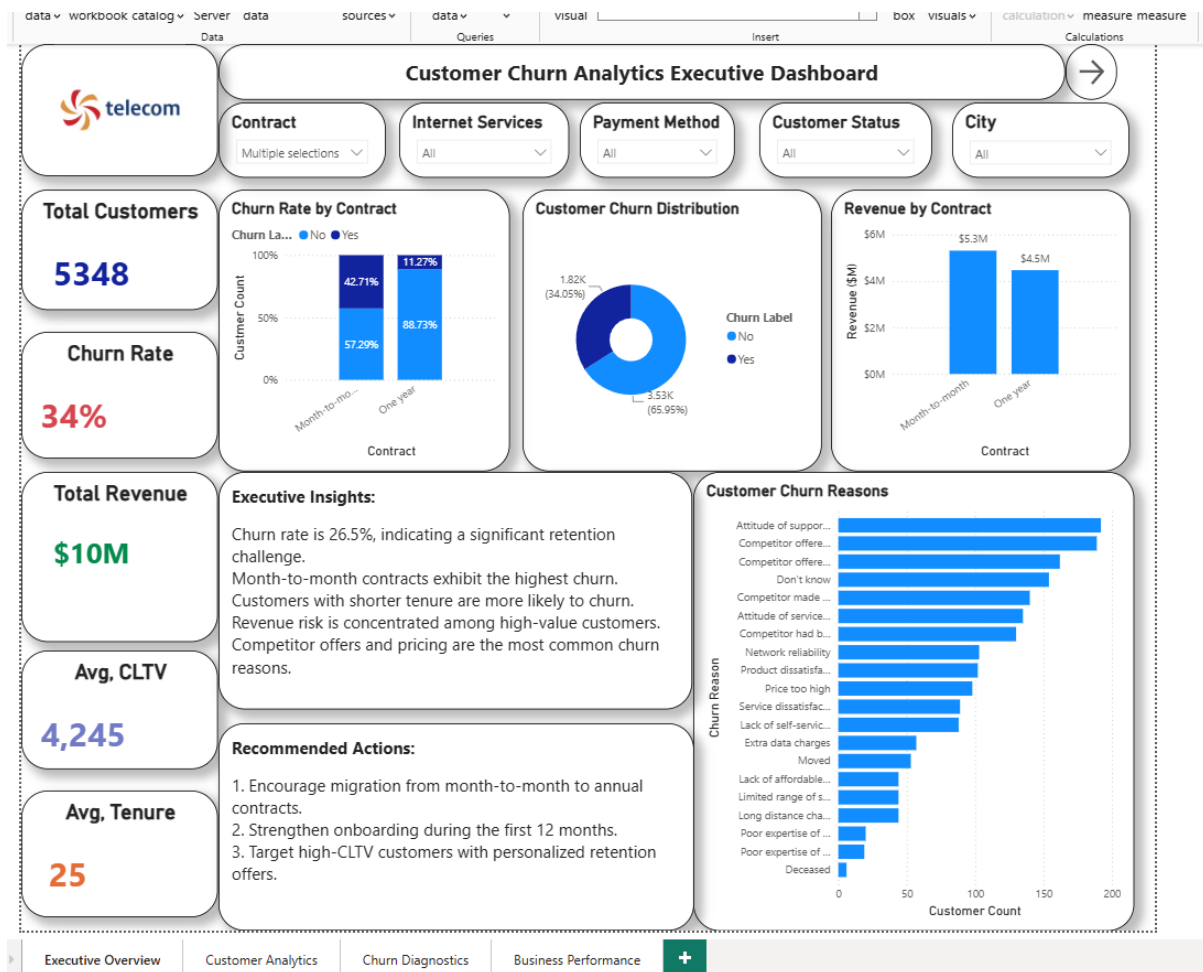

- Understand customer demographics
- Identify churn drivers
- Measure revenue at risk
- Segment customers by value
- Recommend retention strategies

Tools Used

- Power BI
- Python
- DAX
- Power Query
- Jupyter Notebook

Dashboard Pages

Executive Overview

Highlights:

- KPI Cards
- Churn Rate
- Revenue
- Executive Insights

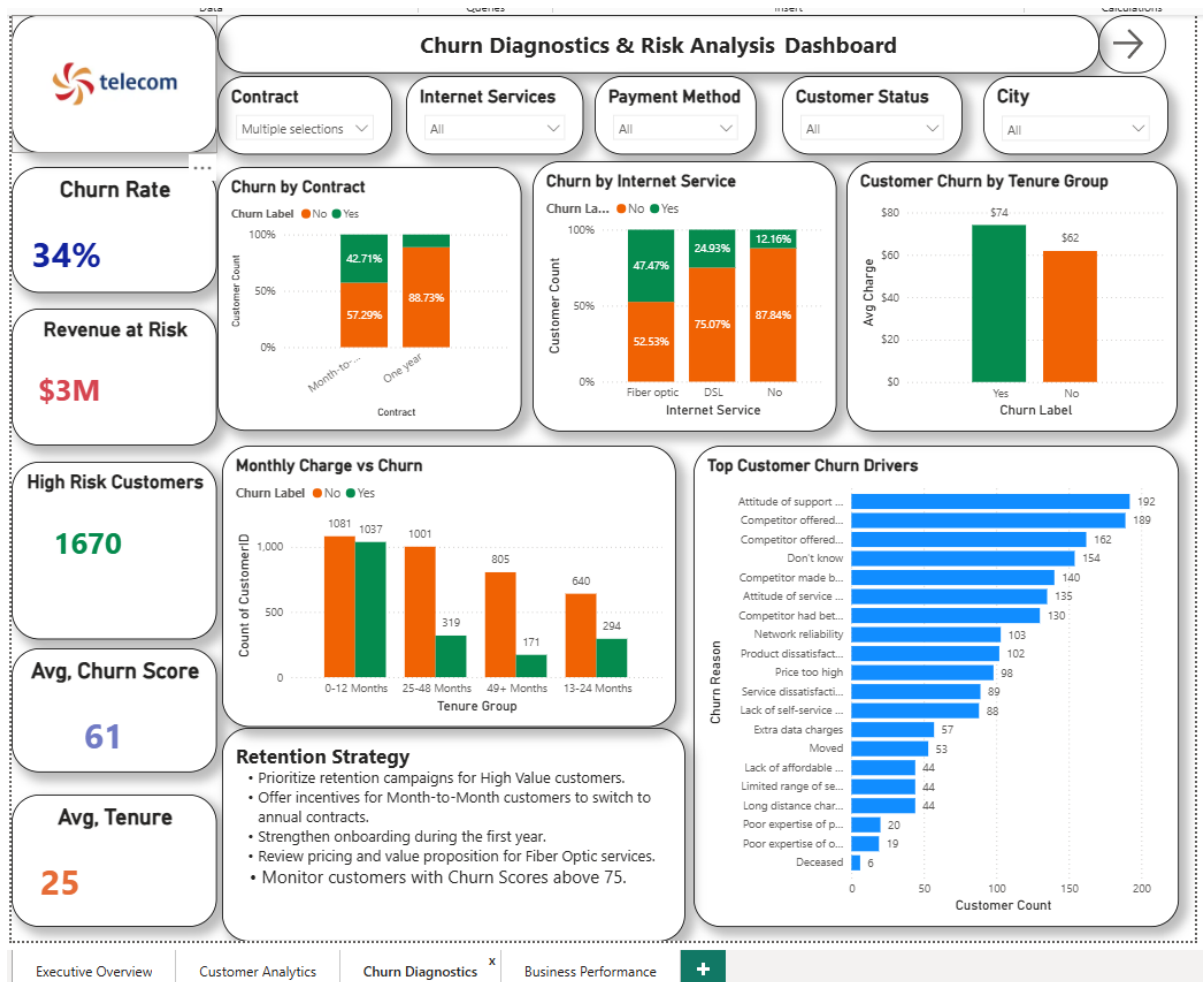

Customer Analytics

Highlights:

- Customer Segmentation
- Internet Services
- Payment Methods

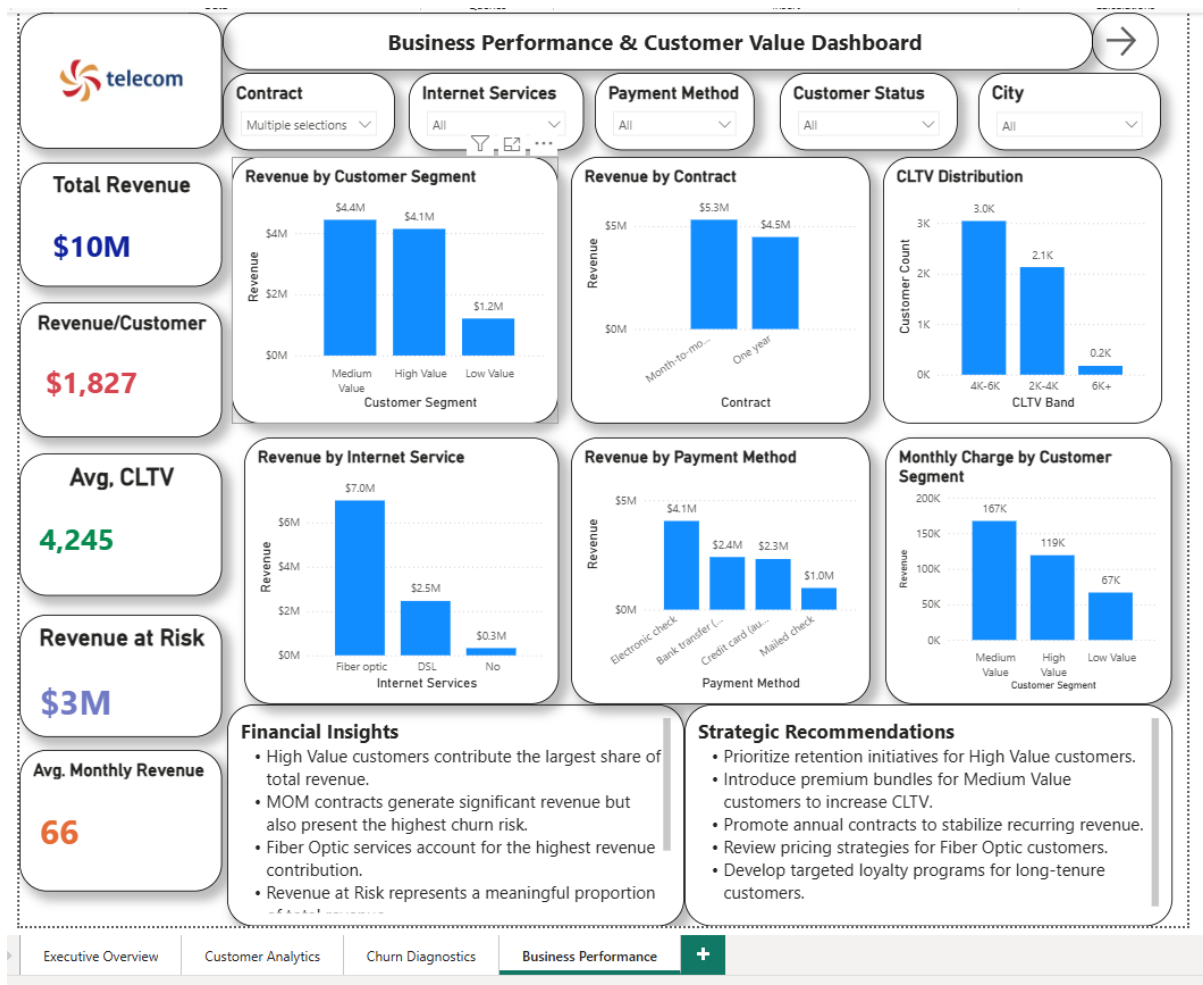

Churn Diagnostics

Highlights:

- Churn Drivers
- Revenue at Risk
- High Risk Customers

Business Performance

Highlights:

- Revenue Analysis
- CLTV
- Financial Insights

Key Business Insights

- 34% customer churn
- Fiber Optic customers generated the highest revenue
- Month-to-Month contracts exhibited the highest churn
- High Value customers represented approximately 25% of the customer base
- Revenue at Risk exceeded \$2.6M

Skills Demonstrated

- Data Cleaning
- Exploratory Data Analysis
- Data Visualization

- Dashboard Design
- DAX
- Power Query
- KPI Development
- Customer Segmentation
- Business Storytelling
